Data communication and Networks

Lecture 11: Middleboxes and NAT (Duct tape for IPv4)

Middleboxes

2

- Devices in the network that interact with network traffic from the IP layer and up
- Common functions
 - ▣ **NAT**
 - ▣ Firewall and other security
 - ▣ Proxy
 - ▣ Filtering
 - ▣ Caching
 - ▣ ...

3 Outline

- ❑ NAT
- ❑ Other middleboxes

The IPv4 Shortage

4

- Problem: consumer ISPs typically only give one IP address per-household
 - ▣ Additional IPs cost extra
 - ▣ More IPs may not be available
- Today's households have more networked devices than ever
 - ▣ Laptops and desktops
 - ▣ TV, bluray players, game consoles
 - ▣ Tablets, smartphones, eReaders
- How to get all these devices online?

Private IP Networks

5

- Idea: create a range of private IPs that are separate from the rest of the network
 - ▣ Use the private IPs for internal routing
 - ▣ Use a special router to bridge the LAN and the WAN
- Properties of private IPs
 - ▣ Not globally unique
 - ▣ Usually taken from non-routable IP ranges (why?)
- Typical private IP ranges
 - ▣ 10.0.0.0 – 10.255.255.255
 - ▣ 172.16.0.0 – 172.31.255.255
 - ▣ 192.168.0.0 – 192.168.255.255

Private Networks

6

Network Address Translation (NAT)

7

- NAT allows hosts on a private network to communicate with the Internet
 - ▣ Warning: connectivity is not seamless
- Special router at the boundary of a private network
 - ▣ Replaces internal IPs with external IP
 - This is “Network Address Translation”
 - ▣ May also replace TCP/UDP port numbers
- Maintains a table of active flows
 - ▣ Outgoing packets initialize a table entry
 - ▣ Incoming packets are rewritten based on the table

Basic NAT Operation

Source: 74.125.228.67
Dest: 66.31.210.69

Advantages of NATs

9

- Allow multiple hosts to share a single public IP
- Allow migration between ISPs
 - ▣ Even if the public IP address changes, you don't need to reconfigure the machines on the LAN
- Load balancing
 - ▣ Forward traffic from a single public IP to multiple private hosts

Natural Firewall

Concerns About NAT

11

- Performance/scalability issues
 - ▣ Per flow state!
 - ▣ Modifying IP and Port numbers means NAT must recompute IP and TCP checksums
- Breaks the layered network abstraction
- Breaks end-to-end Internet connectivity
 - ▣ 192.168.*.* addresses are private
 - ▣ Cannot be routed to on the Internet
 - ▣ Problem is worse when both hosts are behind NATs
- What about IPs embedded in data payloads?

Port Forwarding

Dest: 66.31.210.69:7000

13 Outline

- ❑ NAT
- ❑ Other middleboxes

Firewall

14

- A device that blocks traffic according to a set of rules
 - ▣ Why?
 - ▣ Services with vulnerabilities turned on by default
 - ▣ ISP policy forbidding certain traffic due to ToS
- Typically specified using a 5-tuple
 - ▣ E.g., block outbound SMTP; block inbound SQL server reqs
- GFC (Great Firewall of China)
 - ▣ Known to block based on IP, filter DNS requests, etc

Web caching

15

- ISP installs cache near network edge that caches copies of Web pages
 - ▣ Why?
 - ▣ **Performance:** Content is closer to clients, TCP will perform better with lower RTTs
 - ▣ **Cost:** “free” for the ISP to serve from inside the network
- Limitations
 - ▣ Much of today’s content is not static (why does this matter?)
 - ▣ Content ownership
 - ▣ Potential privacy issues
 - ▣ Long tail of content popularity

Web caching

16

- ISP installs cache near network edge that caches copies of Web pages
 - ▣ Why?
 - ▣ **Performance:** Content is closer to clients, TCP will perform better with lower RTTs
 - ▣ **Cost:** “free” for the ISP to serve from inside the network

Proxying

17

- Non-split connections
 - ▣ Like NAT, but IP address is no longer the one assigned to you
- Split connections
 - ▣ Middlebox maintains two flows: C-M and M-S
 - ▣ Can be done transparently
 - How?

Proxying

18

- Advantages
 - ▣ RTT is lower on each end
 - ▣ Can use different MTUs
 - ▣ Particularly useful in cell ntwks
- Disadvantages
 - ▣ Extra delay can be bad for small flows
 - ▣ Buffering/state makes it potentially costly

Questions

19

- Middleboxes that breaks end-to-end integrity
 - APs?
- How can we tell if middle boxes does do that?
 - ISP? Software on your computer? How can we tell that?
- Net-neutrality
-

CSCI-351

Data communication and Networks

Lecture 11 ext: DHCP

DHCP: Dynamic Host Configuration Protocol

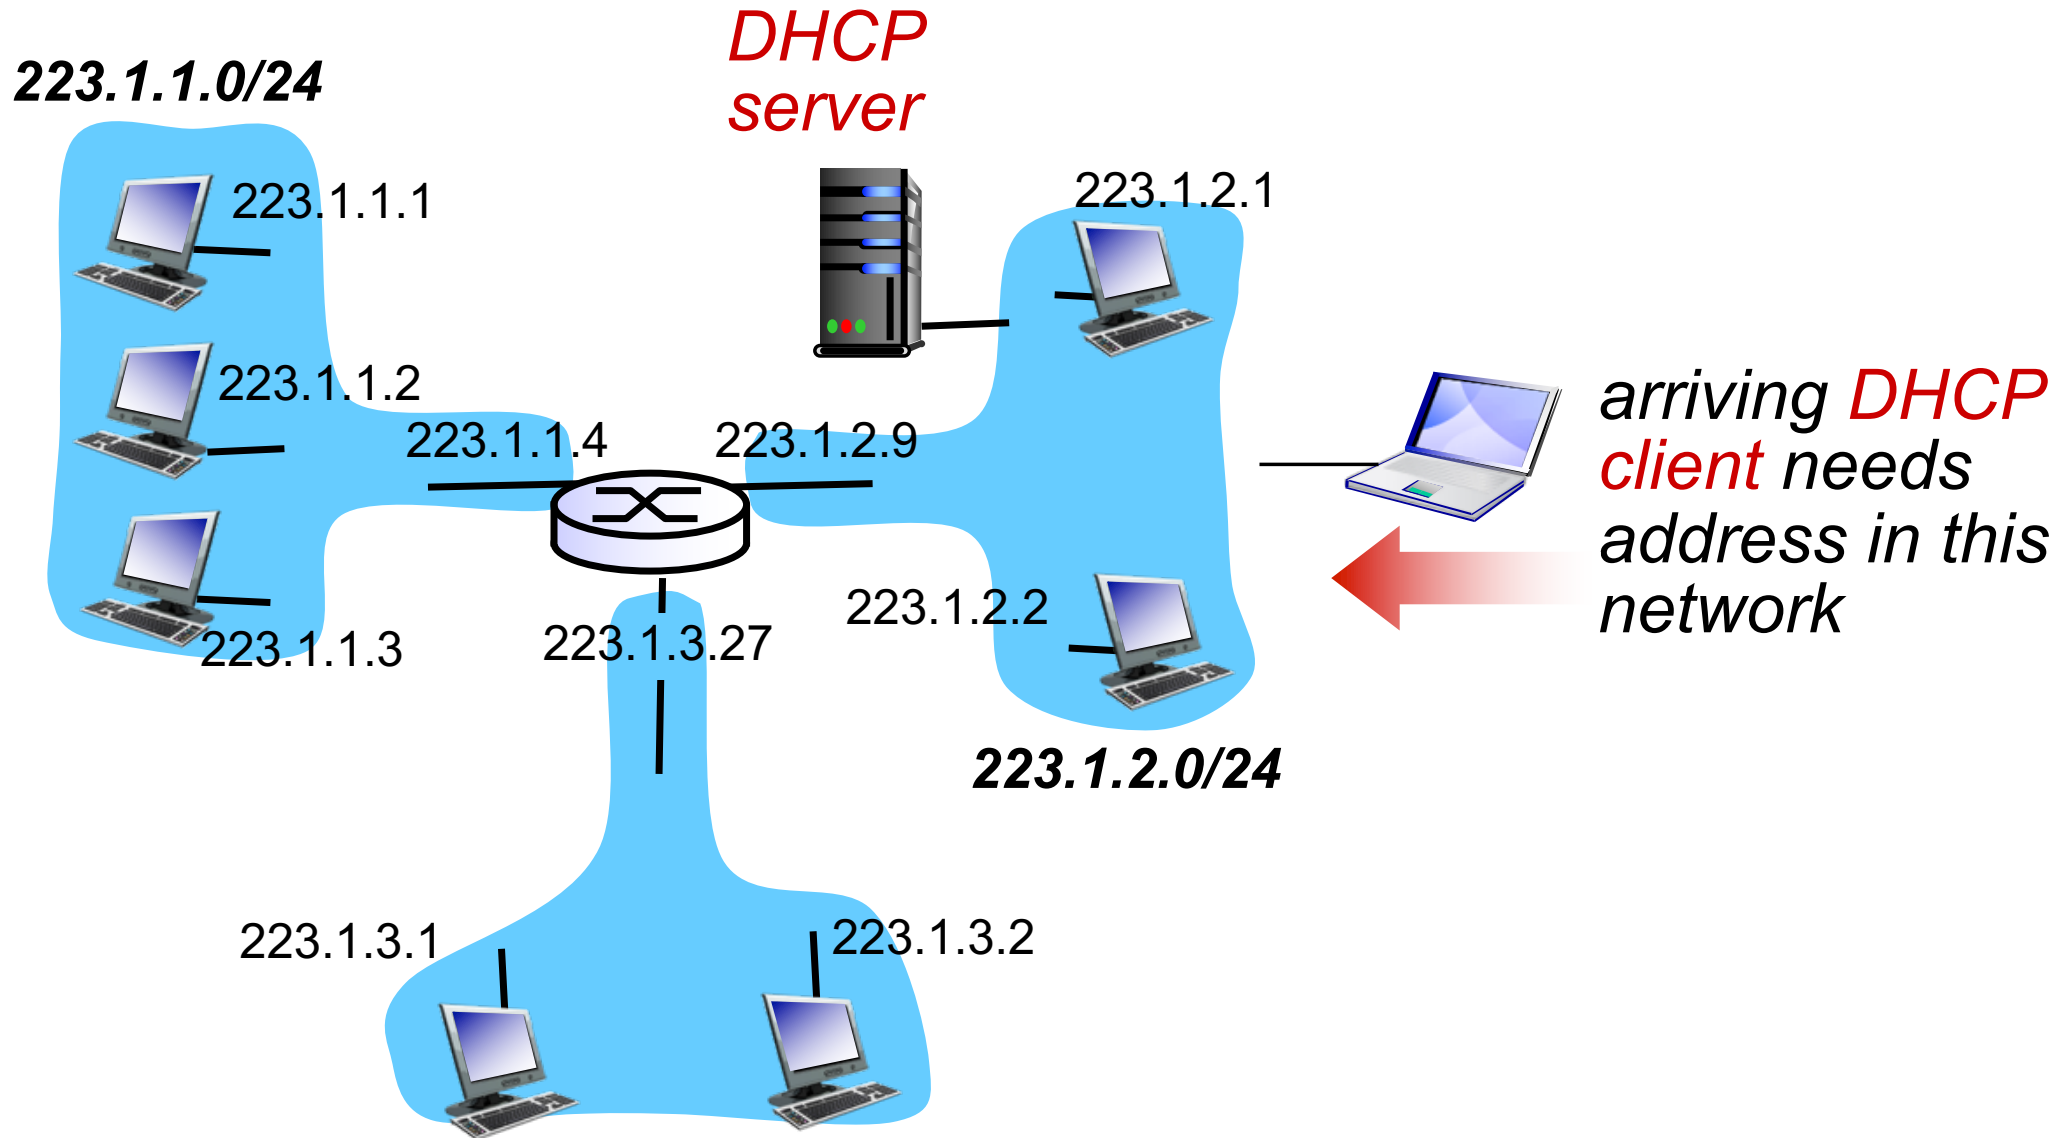

21

- Let's say that a ISP has X customers, How many IPs does it need to have?
 - X ?
- Goal: allow host to *dynamically* obtain its IP address from network server when it joins network
 - can renew its lease on address in use
 - allows reuse of addresses (only hold address while connected/"on")
 - support for mobile users who want to join network (more shortly)

□

DHCP Client-Server

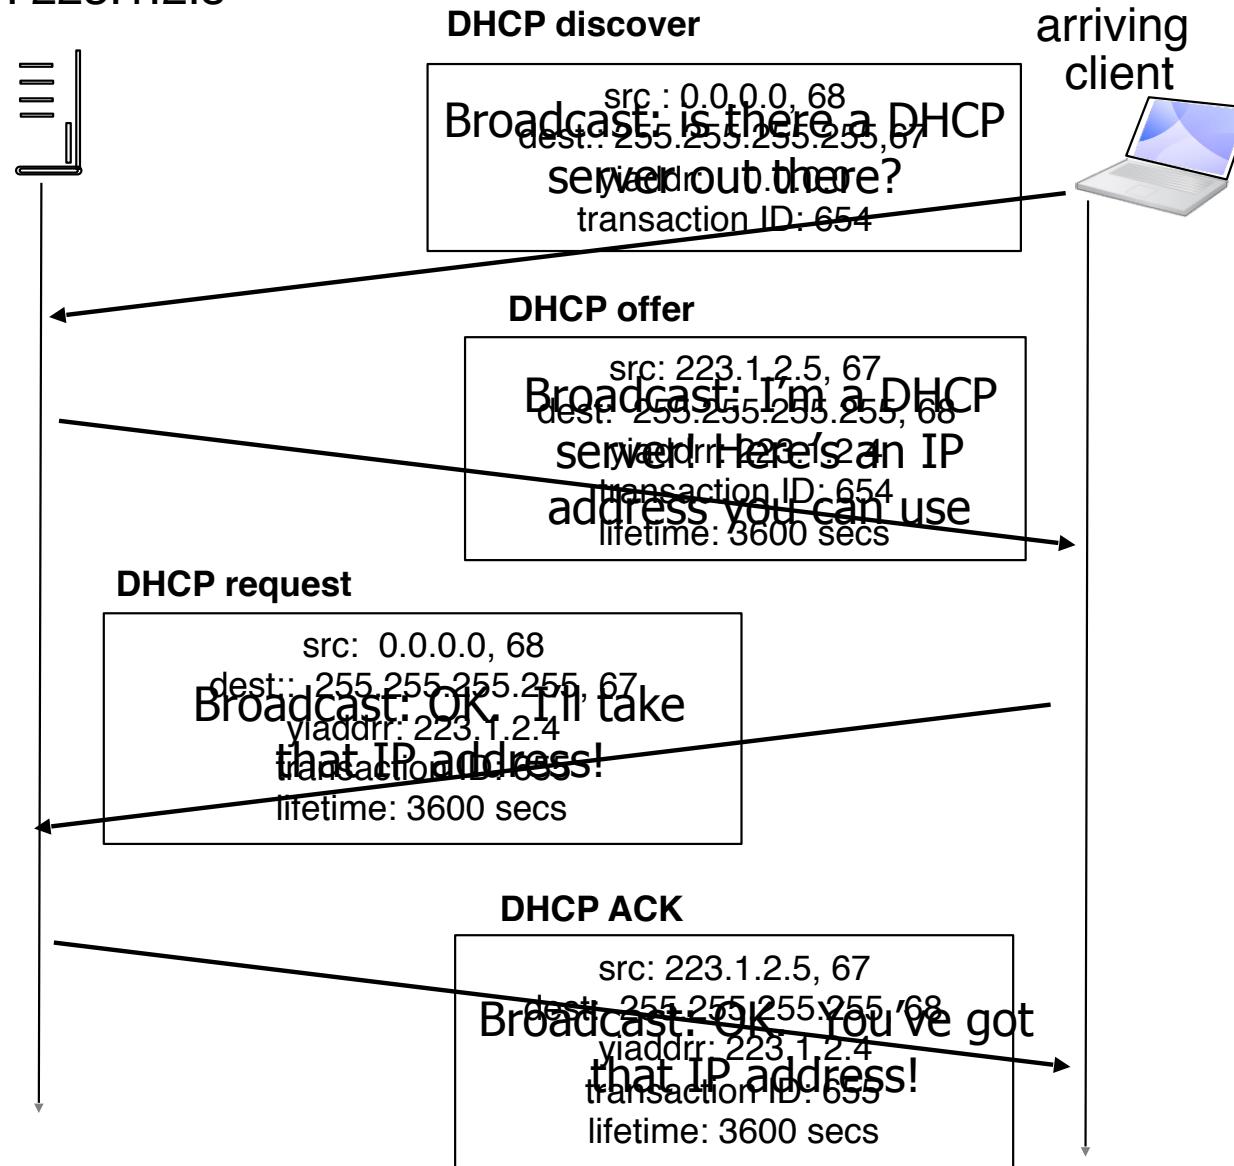

22

DHCP Client-Server

23

DHCP server: 223.1.2.5

DHCP: More than IP address

24

- DHCP can return more than just allocated IP address on subnet
 - address of first-hop router for client
 - name and IP address of DNS sever
 - network mask (indicating network versus host portion of address)

DHCP Header (Do not memorize)

25

Dynamic Host Configuration Protocol				
Bit Offset	0–15		16–31	
0	OpCode	Hardware Type	Hardware Length	Hops
32	Transaction ID			
64	Seconds Elapsed		Flags	
96	Client IP Address			
128	Your IP Address			
160	Server IP Address			
196	Gateway IP Address			
228+	Client Hardware Address (16 bytes)			
	Server Host Name (64 bytes)			
	Boot File (128 bytes)			
	Options			

DHCP: example

26

- connecting laptop needs its IP address, addr of first-hop router, addr of DNS server: use DHCP
- DHCP request encapsulated in UDP, encapsulated in IP, encapsulated in 802.1 Ethernet
- Ethernet frame broadcast (dest: FFFFFFFFFFFFFFFF) on LAN, received at router running DHCP server
- Ethernet demuxed to IP demuxed, UDP demuxed to DHCP

DHCP: example

27

- DCP server formulates DHCP ACK containing client's IP address, IP address of first-hop router for client, name & IP address of DNS server
- encapsulation of DHCP server, frame forwarded to client, demuxing up to DHCP at client
- client now knows its IP address, name and IP address of DSN server, IP address of its first-hop router
